FIFTH WHEEL / GOOSENECK PREP OPTION

13MY Ram 3500 offers a fifth wheel / gooseneck prep option. It includes a factory-installed rear structural cross member and five holes in the bed for fifth wheel (four outer holes) and gooseneck (center hole) hitches. Plastic covers for the holes are provided. Also comes equipped with an additional 7-pin connector mounted inside the box.

The center hole has a casting under it that accepts the gooseneck ball.

The four outer holes have under bed mounting brackets attached directly to the frame.

There will be two MOPAR fifth wheel offerings: a 20,000 lb. and 25,000 lb. (both manufactured by Curt)

20,000 Fifth Wheel (Part #: 82213822)
MSRP = $700
Note: Requires MOPAR roller ($200 MSRP) or fixed legs ($175 MSRP)

25,000 Fifth Wheel w/ Fixed Legs (Part #: 82213821)
MSRP = $1,125

Both of these hitches will require an above bed fifth wheel installation kit (Part #: 82213667). It consists of a bracket to adapt from common fifth wheel hitches to production mounting points on the truck and includes the captured quarter turn tie-downs that mate to the under bed mounting brackets. It is a rectangular tube steel frame with multiple mounting points for commonly available fifth wheel hitches with 22” rail spacing. The purpose is to allow the customer to adapt a fifth wheel hitch that they already own to the factory installed fifth wheel / gooseneck prep kit.
MSRP = $575

There will be two different gooseneck kits available:

- 2 5/16” Ball
- 3” Ball

Kit includes gooseneck ball with a locking mechanism incorporated into base the of ball (image not 100% accurate) and two safety chain tie-downs that fit into the rear outer holes in the bed. Entire kit contents are packaged in canvas bag with Ram's head logo.
MSRP = $250
